Enhancement.....	3
Issue Fix.....	6

Enhancement.

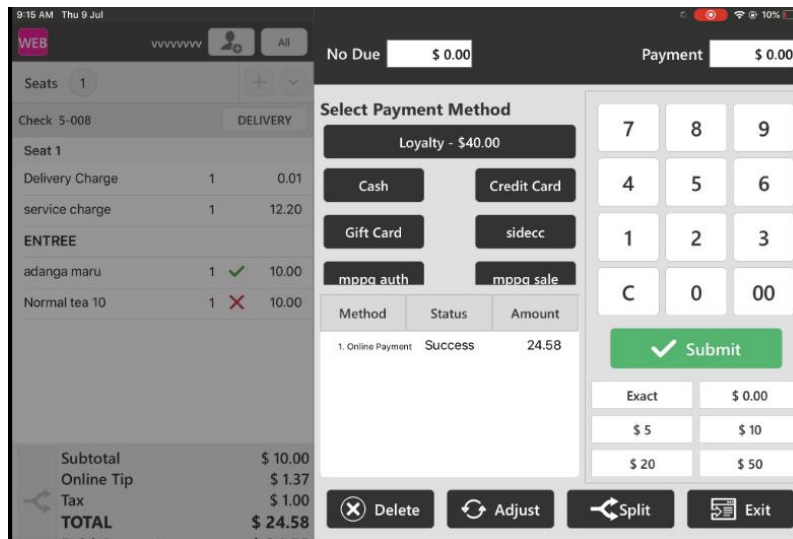

In POS,

- 1) Auto Update for POS.
 - Auto update allows the POS in a business unit to operate in exact version.
 - Notification for update to latest version can be shown.

Supporting Document: Linga- Auto Update of POS phase 1.

- 2) Refunding of void menu items on online order.
 - Users are allowed to void the menu item in the online order without deleting the success payment.
 - Automatically the void amount is deducted from the paid amount.

Screen Layout:

- 3) User restriction added to delete / void the menu Item not even send to the kitchen.
 - An option “DELETE UNORDERED ITEM” is added for the user role restriction in the back-office.
 - On enabling, the users are not allowed to delete/void the placed menu item in the POS without the approval of manager pin.
- 4) Cancel button added in sync checks loaded.
 - Close button to cancel the delayed syncing operation is included.

Screen Layout:

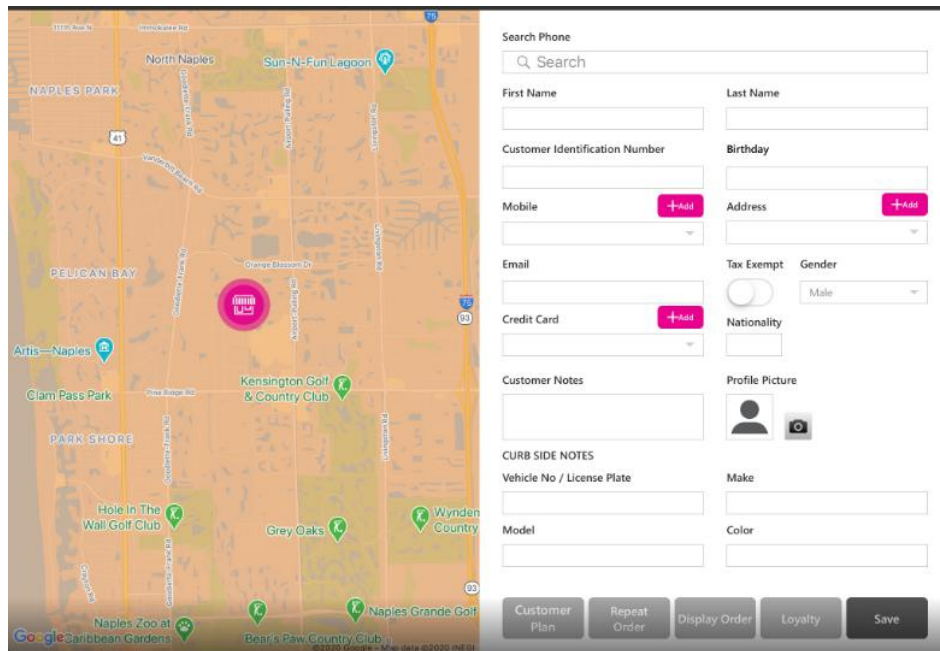

5) Online order notification sound.

- A sound alert on receiving the online orders in POS is implemented.

6) Curbside notes in POS.

- The fields to enter curbside notes is added in the customer profile screen.
- **The curbside notes entered via online ordering is shown in the customer profile screen by default.**
- Also, user can add the curbside notes of the customer in the profile screen.

Screen Layout:

7) Check number column added in phone order screen.

- In the new, out, complete tabs of the phone order screen the check number column is added to display the check numbers for the checks.

8) Online order status screen

- A new tab “Order Status” is included in the phone order tab.
- User can view the status placed, confirmed, hold, expired for the orders.

Supporting Document: LINGA- Functionality flow for order status screen.

9) Driver status screen

- A new screen to have a complete track of the drivers who were departing and arriving is implemented in the phone order screen.

Supporting Document: LINGA- Functionality of driver status screen

10) Print CC receipt with Node number.

- The receipt for the CC now includes the node number from which the receipt is printed.

11) Swift 5 changes.

- The development language upgrade from swift 4 to swift 5 is done.

12) Online order service charger and Online Tip was moved to footer section in the receipt print.

Issue Fix:

- 1) **Issue ID 66721** – The void reason print issue is fixed.
- 2) Reprint closed / active bluetooth printer crash issue was fixed.
- 3) Certain Map zones during the selection of delivery order application crashed it is fixed now.
